

ABSTRACT

For Indonesia, tourism is an important sector in the economy, various tourism development programs continue to be improved through the expansion and utilization of national tourism potential. Based on data on the number of tourists per month according to tourism types obtained from the Bali Provincial Statistical Office (2015-2019), there was an increase in the number of tourists. In 2015, the number of tourists visited was 4,001,835 and in 2019, an increase of 6,275,210.

The hospitality industry has always evolved to provide innovation that is for visitors seeking unique experiences on their journey. In designing resort hotel buildings, the most basic thing to note is to understand the local climate, geographical conditions, so that it affects the environment, morals, social and economic as well as so that visitors can feel comfortable and safe and thus reduce stress. From this phenomenon, innovations that develop to provide better comfort are one of them through Strategic Biophilic Design. This approach of connecting people with nature within the development environment has shifted from new trends to core industries for good reasons.

Interior Design of Hotel-Resort The Ulaman Balangan Bali is a hotel that designed to provides tourists with accommodation and other support facilities that are able to accommodate the needs of visitors with recreative interior space suitable for natural elements and suitable material applications on hotel's interior. It is hoped that this design can have a good effect or effect for both the tourist and the surrounding environment.
