

ABSTRACT

Interior Design of Regional Revenue Management Center of Sukabumi City with Activity Approach

Local taxes are one of the fundamental elements in the development of a region or region. As a government agency in the field of regional income, the Regional Revenue Agency of West Java (BAPENDA) has an important role in increasing the income of West Java Province. One of them is through public services in the form of services and local tax management carried out at 34 BAPENDA branches called the Regional Revenue Management Center (P3D), including in Sukabumi City. The Regional Revenue Management Center of Sukabumi City has a purpose to build good governance in order that it can increase regional income through public service. With the main function of the office as a public service office and regional income management, it is necessary to match the space used for each masing activity carried out. Based on the results of observation interviews, comparative studies, literature studies, and precedent studies, this design applied an activity approach by taking the FAST (Efficient, Organize, Trustworthy) concept as a design solution to the problems that have been identified. The concept is applied to space organization, office space concept, public service space concept, general space requirements, and visual concepts.
