

ABSTRACT

The Walisongo State Islamic University Library in Semarang is one of the libraries of Islamic State Universities in Indonesia. One of the conditions for the establishment of a university is to have library facilities. Currently the library is located on Jl. Prof. Dr. Hamka Km. 2 Ngaliyan Semarang. One of UIN Walisongo Semarang's efforts to improve knowledge for students is by continuing to improve and improve library service facilities. Based on the results of observations, the UIN Walisongo Semarang Library has space problems that can affect the activities of its users. Such as, the lack of processing facilities, the accumulation of activities in several areas, and the spatial organization concept that is not yet optimal. One of the efforts to solve the problems above is to implement an approach that is oriented towards the activities and behavior of library users. Therefore, the purpose of redesigning the library is to optimize the facilities and space organization that can make it easier for users to do activities in the library. In addition, the library will display a visual concept by displaying the identity of the library and the function of the library as a recreational area. There are also additional facilities in the form of public computers and Walisongo centers. Through this approach, it is hoped that the UIN Walisongo Semarang Library can provide convenience in activities and increase user enthusiasm for learning by providing facilities that are in accordance with the character of students.
