

ABSTRACT

PT. PLN (Persero) Central Java Transmission Master Unit is a one-level work unit under the head office led, fostered, managed by the General Manager and carries out business activities as an electricity transmission service and is responsible for ensuring the availability of work plans, strategies, business processes, mitigation risk analysis, compliance, and unit management according to the mission by optimizing available resources efficiently, effective, synergistic, reliable and quality. There are problems found in the interior in the office of PT. PLN (Persero) Central Java Transmission Main Unit is about supporting facilities that have not been optimally met, space organizations that are still unable to facilitate employees in carrying out activities, and there is no implementation in accordance with the standardization of PLN Office Interior Design and Technology Guidelines. The use of a biophilic approach and referring to standardization derived from the Regulation of the Minister of Home Affairs Number 7 of 2006, as well as the standardization of Interior Design Guidelines and PLN Office Technology can be a solution to the problems found in order to provide a forum that is able to facilitate and increase the spirit of performance and productivity of employees.
