*The giwangan terminal is a type A terminal, which is a terminal that serves inter-city and inter-provincial transportation (AKAP), inter-city and intra-provincial (AKDP) transportation, and rural transportation. This terminal is the only type A terminal in Yogyakarta which has an important role as the main entrance to Yogyakarta for people who use the bus mode of transportation. The condition of the terminal this year is very different from the vision and mission of the city of Yogyakarta which will promote public infrastructure, at the entrance to the terminal there is no direction for the layout of the terminal facilities. That way, the goal appears to be redesigning by looking at the current condition of the giwangan terminal and developing it into a Type A Terminal that complies with government standards and with a Universal Design approach that is livelier and activities more effective. In data collection, the design uses observation, interviews, literature studies, and comparative studies and for design, uses programming methods, themes and concepts, and the final result is the output of the design results.*
