ABSTRACT

Chubby UMKM is a company engaged in manufacturing and trading located at Perumnas Condong Catur, Jalan Tanjung No. 312 Depok, Sleman, Yogyakarta Special Region. Chubby UMKM has 3 product names, namely, Chubby choco which produces chocolate food, Chubby Accessories which produces accessories, and Chubby store which sells books by taking from resellers. The obstacle faced by Chubby SMEs is the process of calculating the cost of consignment sales and profit and loss which is still manual and not in accordance with accounting standards. This inaccuracy causes the sales books to not be recorded properly. So the solution needed by Chubby SMEs is to create an application that can handle the calculation of selling costs to the recording and preparation of profit and loss. In making this application using a prototype model and the PHP programming language. For web databases, use the CodeIgniter framework in the MYSQL database menu. Testing the application using the Black Box testing method. The test results show that the application successfully displays the main product and customer data features, features of ordering transactions, consignment sales, sales returns, accounting reports, namely journals, ledgers, consignment sales reports, sales returns reports, and profit and loss.

Keywords: sales, consignment, PHP, MYSQL, profit and loss, information system
