ABSTRACT

The Telkom Digital Talent Incubator 2020 (DTI2020) program is a digital skill development program and one of them is FrontEnd Developer. This program is intended for final year students of S1/D4/D3 which is implemented by PT. Telkom Indonesia with participants from Telkom University, University of Indonesia, Bina Nusantara University, and IT Telkom Purwekerto.

The emergence of the COVID-19 pandemic in the world, especially in Indonesia, has changed various activities and habits of the community. Information media for COVID-19 is needed by the community both conventionally and digitally, in addition to the implementation of regulations by the Indonesian government regarding the need for proof of negative COVID-19 test results while traveling is one of the implementations of new habits that must be carried out by the community. The use of website-based media will greatly help the community because its use is easier and can be accessed anywhere and anytime.

BetaMedic is the result of DTI2020 activities in the form of a website that is expected to help the community during the COVID-19 pandemic with the features in it. BetaMedic has been completed until it is hosted on the internet and has received a very good assessment from the supervisors and lecturers of the DTI2020 program.
