

ABSTRACT

The purpose of this study is to determine the effect of investment decision on the performance of PT Perusahaan Gas Negara Tbk under the conditions of inflation and exchange rate movements. In this study, the approach used is quantitative research using descriptive methods with Ordinary Least Square (OLS) regression model. The object for this study is PT Perusahaan Gas Negara Tbk from 2003 to 2021, the data used in this study is time series. The result of this study indicates that investment decision and inflation partially affect the performance of PT Perusahaan Gas Negara Tbk, while exchange rate does not affect the firm performance. Investment decision under the conditions of inflation positively and significantly influence the performance of PT Perusahaan Gas Negara Tbk. However, under the condition of exchange rate movements, investment decision still does not affect the performance of PT Perusahaan Gas Negara Tbk.

Keywords: Investment Decisison, Inflation, Exchange Rate, Firm Performance
