

## PREFACE

Praise be to Allah Subhanallahu Wa Ta'ala, Who Ever Bestows His Grace, for empowering the author to finish the final project titled Multi-target Detection Method On FMCW RADAR For Non-contact Breathing Measurement. This Thesis was created by the author in order to complete one of the requirements for earning a master's degree from Telkom University's Faculty of Electrical Engineering.

The author is aware that there are still many weaknesses in both the writing process and the discussion of the contents of this thesis, which is far from being perfect. Despite these drawbacks, the author is open to suggestions and helpful criticism in order to improve the research.

In closing, the author would like to express gratefulness to everyone who helped and expresses the hope that the thesis has developed will be helpful to both the author and others so that it can be produced more effectively.
