

ABSTRACT

Jakarta Province as one of the cities that has the most populous population in Indonesia, certainly needs to be supported by the existence of educational facilities such as procurement libraries from the government. It is evident that the following Jakarta Provincial Government supports the advancement of education for the people of Jakarta Province, this can be seen from the many schools both public and private.

With a densely populated population, the Province of Jakarta has been able to compensate for the provision of one educational facility such as a library but there are still standardized facilities in the library in accordance with government regulations. Some parameters that can be a measure of the non-fulfillment of Jakarta Province library standards are less land area, less library visitors, there are no facilities for all groups, incomplete facilities and incomplete collection of books.

Seeing the above problems, it is necessary to redesign the library and also increase the area to the gallery Cipta II building to become a place to find information and reading that is comfortable and interesting that can meet the population needs of the Jakarta Province for all people.
