

ABSTRACT

Dermabrasy Therapy Skin Care treatment clinic was built in 2008 which has a branch in bandung. Clinic care dermanbrasy therapy skin care has a very basic problem that proces administrative records are still manual so that causes the process of check drug stocks are not controlled and often the recording of duplicate drug data. This causes the officers to be slow in knowing the drug stock. To overcome all that, required an application that is able to process the drug stock data accurately quickly and accurately so that later biased petrified officers in processing drug data. Web-based drug data processing application is built using the programming language php where in the process using frame work codeiteriter and use mysql as a database on data processing application of this drug. This application development method using Development Life Cycle (SDLC) with waterfall model.

Keywords: application, Administration of drug data processing.
