ABSTRACT

PT Cipta Sama Abadi (CSA) is a company engaged in the broiler farming business located in Parung, Bogor and established since 2004. In managing farm data at PT CSA, they are still implementing a recording system using the Microsoft Excel application. This is unfortunate because it will require a long process in processing data and is prone to various errors. From these problems, a website-based application was developed using the Scrum and Kanban frameworks. It is hoped that this application can be one of the facilities that can streamline the livestock management process and minimize the occurrence of errors.
