ABSTRACT

The rapid development of science and technology in the era of globalization requires us to follow these developments. PT. Aero Systems Indonesia is an IT service provider company serving various industries, including Professional Solutions & Services, Infrastructure & Managed Services, Product Fulfillment, and Digital Business. This company has been trusted by PT. Airnav Indonesia (LPPNPI) to design the PPID application (Information and Documentation Management Officer) in the "Designing PPID Application for POC at PT. Airnav Indonesia" project.

LPPNPI as a public company (Perum) has a serious focus on the need for public information and applies the principles of Good Corporate Governance (GCG), such as Transparency, Accountability, Responsibility, Independence and Fairness. The community can submit a request for information to the LPPNPI, which is obliged to fulfill the request unless the information is exempt or has an adverse impact whose consequences have been tested. Requests for information can be submitted through established mechanisms and standards.

In order to fulfill the demands of Law 14/2008 concerning Public Information Disclosure, the LPPNPI intends to create a PPID Mobile Application that will make it easier for the public to access information and submit requests for information and management related to LPPNPI information and documentation. The PPID application has two versions, namely a website version that focuses on information about the LPPNPI that can be accessed by the public, and a mobile version that focuses on the public wishing to submit information requests to the LPPNPI.
