This internship report is the final project for Diploma III Program Software Engineer students at Telkom University who have completed an 11 (eleven) month internship at PT. AeroSystem Indonesia. The purpose of this internship report is to find out the design of a website-based application that can manage events and manage tickets at an event. This is motivated by the need for the event organizer team to manage events and tickets which have difficulty managing and managing events if they are set manually. However, with this application the event organizer team can manage and organize events that will be held or have already been held.
