

## **ABSTRACT**

### ***NEW INTERIOR DESIGN OF PET CARE CENTER (CAT AND DOG)***

*The increasing public interest in keeping pets also affects the increasing need for people to meet the needs of their pets, as a form of affection and care for these pets. Such as the availability of facilities as a place to meet all the needs of pets. However, some of the facilities found did not meet all the needs of pets, and seemed inadequate. One of the facilities that is still lacking attention is the playground area or playing area for animals and lodging or pet hotels which seem confined, this is because most designs of this type have a limited land area. The purpose of this design is to facilitate all the needs of pets with various facilities in it that adapt to the nature and behavior of pets who want to always be connected with their surroundings. In addition, this design also provides facilities that function as a forum for increasing interaction between animals and humans, and also as a forum for educating animal owners and those who are not animal owners about how to love and care for pets that are good and right.*
