

ABSTRACT

DESIGNING HALCYON ART GALLERY WITH A SPACE FLEXIBILITY APPROACH

Art gallery is a space for displaying artworks to the public. Artists showcase their artworks and interact with visitors. The main goal is to introduce, appreciate, and promote art. Visitors can learn, reflect, and explore the artworks. Art galleries also sell art pieces, displaying diverse collections from different artists for enjoyment. Currently, art gallery visitors come from various backgrounds and generations, each with their own purposes. Art galleries have become a favorite place for spending leisure time. They must have space flexibility to accommodate different themes in each period and cater to diverse user needs. The aim of this design is to create an art gallery focused on multi-activity aspects and responsive to the current developments in art gallery functions, meeting the increasing number of visitors. The design adopts a space flexibility approach as a solution to address these challenges.
