

ABSTRACT

According to data obtained from the southern coast statistika center, there was a significant increase in visitors of 10,000 from 2019 to 2022. This is possible because the south coast public library has already contributed to the government's mandate with literacy programs and policies for communities through reading culture development activities and the development of libraries with their activities as "publications and socialization of interest and reading culture." But looking at data from the southern coastal public library of the library in 2022 noted 87% of visitors not satisfied with the library's life-support facilities. The yandes amrianal (2023) points out that visitors' reasons for visiting the library include reading and group study and computer facilities for school activities. With the need for visitors in any library activity, they should have interesting themes and concepts to increase the interest of visitors especially in this highly developed time of the modern era. To increase the satisfaction of sharing such activities, a library structure is needed that is supported by proper regulation and technology according to the user's own desires. Therefore, the southern coastal public library would need a redesign that could be made.
