

## ABSTRACT

Gekiyoo is a website-based application created as a solution to make it easier for the community to manage ticket sales and events. This project started as a guide community event with the CHSE protocol of the Ministry of Tourism and Creative Economy, which encourages the use of online ticket registration and payment to avoid crowds during the Covid-19 pandemic. In this context, Gekiyoo exists as an alternative to meet the needs of the community and users in managing events efficiently. This app has a primary role: for the community and for the users. Features include online ticket sales, event management, and sharing results with community members. Gekiyoo uses Laravel and React Js technology as the main framework with MySQL database to store user and activity information. The application test involved 20 respondents using the usability test method, and most of them agreed that the application's features support the management of ticket sales properly, are useful and have a good design.
