

ABSTRACT

This application was made to make it easier for people who are still having trouble or are still making mistakes in managing their finances. With this application, parents no longer need to be involved in managing their child's finances. Not only for children, people who already have their own income who still have difficulty managing their financial expenses and income can also use this application.

This application aims to help users who have difficulty managing their finances. Users will find it easy to add their transactions by simply selecting the category of transactions that have been provided and adding how much money is spent. Another main feature is that parents can see all transactions made by their children by taking the token which will later be provided in the application.

Keywords: *managing finances, child transactions, parental monitoring*
