This research aims to implement an Odoo-based Enterprise Resource Planning (ERP) system to support financial reporting in the chicken storage industry, case study: CV. Cindil Laras. This company is one of the chicken farms with a monthly production reaching 8,200 kg. Currently, financial management and accounting still rely on separate Microsoft Excel applications, leading to issues such as data loss, difficulty in data retrieval, and file accumulation. To address these problems, this research implements Odoo version 16 ERP system using the QuickStart method. Odoo is an open-source application that encompasses various business application programs, including the Accounting module.

This study is limited to using secondary data from previous research and primary data from interviews with CV. Cindil Laras. The research findings show that the Odoo version 16 ERP system was successfully implemented to manage financial reporting in CV. Cindil Laras. The integration of the Accounting module in the ERP system allows for more effective and efficient financial reporting management. With the integrated ERP system, CV. Cindil Laras can improve transaction management efficiency and effectiveness and enable real-time transaction management.

Implementing Odoo version 16 ERP system using the QuickStart method is the right solution for CV. Cindil Laras as a Micro, Small, and Medium Enterprise (MSME) with an annual revenue of Rp5,000,000,000,- as it can achieve quick results, does not require extensive data, and offers greater flexibility. Therefore, Odoo-based ERP implementation becomes a crucial step for the chicken storage industry to enhance efficiency and financial management.
