

ABSTRACT

In 2021–2022, destinations being developed will increase, meaning that the number of destinations, such as performance halls, will require performance buildings with complete facilities.

The city of Bandung has nine performance halls, not all of which have facilities that meet user needs and facility standards, such as make-up rooms, costume rooms, practice rooms, waiting rooms, and supporting facilities for the community. This was found from the results of interviews, literature studies, and field surveys.

This design applies a concept that is lifted from art in the city of Bandung. Raising an artistic theme by showing a guide to the typical city style and art from the City of Bandung, the concept applied will have simple, natural materials, colors, and furniture that can present the characteristics of the art of the City of Bandung. So by increasing the facilities in the building, it can increase the attraction of society, communities, and tourists from various countries to the arts of the city of Bandung.

Keywords: Art, Bandung City, Facilities, Performance building.
