

ABSTRACT

The notable-daily use of kitchen products is now expanding very rapidly. The design of a good product is the design of a product that notices the quality, function, appereance and also the durability of materials in products. Good materials resilience can reduce repurchase in short periods where it will also affect the environment and reduce domestic waste.

Cooking is one of the daily activities that help meet human needs. One of the products used for cooking is cutting board. By those reason, cutting board with strong materials is desperately needed by society. In design, the product will take advantage of the Kayu Jati Belanda from left over of cars packaging as the materials that are have hight durability.

Keywords: Cutting board, Material, Durability
