

## ABSTRACT

*A dining table is one of the must-have pieces of furniture in every home. Seeing that the population density continues to increase every year, the land for Indonesian people to live is also getting smaller. Many people choose to build a house with a simple but functional size. Apartment spaces that tend to be small make it difficult for people to organize the layout of furniture so that their room does not look cramped. One solution that can be given is to use multifunctional furniture. The purpose of this design is to produce multifunctional dining table products that can facilitate users. This writing is an effort to design a multifunctional dining table using qualitative research methods by conducting field surveys and distributing questionnaires and design methods using UCD (User Center Design) which focuses on apartment users to design. The results obtained from the questionnaire survey that apartment users feel their dining room looks cramped if using dining table products on the market and multifunctional dining table products can help solve user problems in organizing their apartment dining room.*
