

ABSTRACT

Children aged 0-6 years which is the golden age and is a critical period in the stages of human life that will determine the child's further development. All aspects of language use should be introduced to children before this golden age ends. One of the difficulties that becomes an obstacle to learning English is the ability to recognize and pronounce the sound of letters well. These problems can be overcome by learning using the phonic method, which is a way of teaching reading by teaching the sounds of letters in a multisensory manner, then using sound synthesis methods to read words. By knowing the sound of pronunciation, one can learn how to pronounce English correctly.

Therefore, an English learning game application was created using the phonic method so that children can play while learning. This Easy English application aims to assist parents or teachers in guiding children aged 4-7 years in teaching English to children. From the results of the survey that was carried out and calculations using the SUS method, the final score was 82.43 with grade B, which means that the Easy English application is suitable for use as a medium for learning English.
