ABSTRACT

In a room there are furniture needs that support a person's activities in it, one of which is a table or storage cabinet, which is a mandatory furniture in the bedroom. Therefore, a table or storage cabinet is needed with good quality, in this paper the researcher designs a smart bedside table or nightstand that has good quality. By using the UCD (User Centered Design) research and design method taken from field data at the PT. Indo Catta Interior company which requires a smart bedside table with good quality. From the data that has been collected, researchers get a smart bedside table design that has a bluetooth speaker to listen to a song, wireless charging to facilitate smartphone data charging, and the use of lift up hinges to facilitate the use of laptops.
