

ABSTRACT

The Family Laundry laundry business is a service company that was founded in 2012, located on Jalan Raya Bojongsoang, Sukapura, District. Dayeuhkolot, Bandung City, West Java. This company has complete facilities, however, when recording cash receipts it is still recorded using paper, which creates many problems, such as illegible, lost or even torn writing. Therefore, a solution was provided to this problem by creating a useful application to assist the process of recording cash receipts at the Family Laundry laundry business. The application system development to support the creation of this application uses the Software Development Life Cycle (SDLC), this application was created using the PHP Programming Language, MySQL Query Language, CodeIgniter Framework, and the application design process is supported by Unified Modeling Language (UML), Entity Relation Diagram (ERD). This application is successful in managing, recording laundering activities in process and those that have been completed, managing records of cash receipts and disbursements, presenting general journals, ledgers, receipt reports and expense reports and presenting profit and loss.

Keywords: Receipts, Expenditures, PHP, Codeigniter, Laundry Business, Web Based Applications.
