

ABSTRACT

PT PERTAMINA (PERSERO) is one of the largest BUMN companies in Indonesia. This state-owned company is engaged in the oil sector. The business run by PT PERTAMINA (PERSERO) is oil processing starting from upstream to downstream and marketing. Therefore, PT PERTAMINA (PERSERO) is one of the companies that has the most influence on the pace of the Indonesian economy.

As a large company with abundant resources, PT PERTAMINA (PERSERO) always provides the best comfort and security for guests and also for employees at the PT PERTAMINA (PERSERO) office. One of the comfort and safety provided is the use of low carbon emission materials or chemical compounds in materials that can endanger employees and also in space elements and the use of materials in furniture and the arrangement of furniture layout in the room. With the use of hazardous materials and the arrangement of the furniture layout, employees and guests can feel comfortable and safe when visiting the PT PERTAMINA (PERSERO) office. However, the material in the room and furniture elements as well as the layout of the furniture is still not good and precise.

Therefore, to minimize inconvenience and affect the safety of guests and employees, we need a design that is able to overcome this problem, and uses an ecological theme where the materials used are natural and can affect the environment around the office by providing comfort and security at the PT PERTAMINA office (PERSERO).
