The development of the 21st century education system is very rapid, and how people see many new innovations in all the activities offered. More than just a place to read and learn, it is the center of relationships and community gatherings designed to improve communication between individuals. Development accompanied by major changes due to the digitization of collections and services using the latest technology. One of the libraries with great potential for information development is the library of the Ministry of Education and Culture of the Republic of Indonesia. A collection of education and publications from the Ministry of Education, Culture, Sports, Science and Technology. However, many activities are hampered by underutilization of otherwise well-equipped spaces. Therefore, using a technology approach under the theme of 'Organization Through Technology' has the potential to maximize the use of space and facility arrangements to improve the Indonesian education system.
