

Abstract

This final project aims to redesign the office of PT Murni Solusindo Nusantara Jakarta by applying the appropriate technological approach. Office redesign has become an important requirement in optimizing company productivity and efficiency. This final project begins by analyzing the company's needs, and existing and existing technology infrastructure. In office redesign consider factors such as space requirements, work flow, comfort, security, and technological requirements required. The proposed technological approach includes implementing a more robust and stable network system, implementing the latest hardware and software, and using integrated technology to increase efficiency and productivity in the office. It is hoped that the redesign of the PT Murni Solusindo Nusantara Jakarta office will provide significant benefits for the company, especially in the interior sector in terms of increasing operational efficiency, increasing team collaboration, and improving user experience.
