*Education is an important thing that must be taken by society. One of the Education Cities is Bandung. Unfortunately, currently both the quantity and quality of education in Bandung is still lacking, especially in Cimenyan District. To increase the quantity of education, it is necessary to add schools in the regions, while to improve the quality of educational facilities to attract interest in learning, one of which is the action learning method which is applied to natural schools. In addition, educational applications that can attract students' interest in learning can be done with an analogy approach to play in interior design. With the Mandalamekar Nature School in Bandung, which applies the play analogy approach to its interior design, it is hoped that it can attract people's interest in learning, especially at the elementary, middle and high school education levels so that the quality of education in the regions can improve.*

**Keywords:** *natural school, action learning, play*
