

## ABSTRACT

*Pesantren khalaf or modern pesantren according to Departemen Agama 2003: 87 is a pesantren institution that incorporates general lessons into the madrasah curriculum used. The main function of boarding schools is as a place to live that supports student learning activities with all the facilities that support their daily activities. Santri are teenagers who are at the age of adolescence 12-18 years. In this case, the adolescent phase is a phase where their potential to want freedom and their sense of self-actualization is very high, so they need a place that can support the changes they experience so that they do not go in a negative direction. Pesantren Al-Basyariyah 2 Bandung prioritizes education based on Islam as found in the curriculum used, namely the TMI curriculum. Essential space needs are needed to achieve the spiritual values of students. This is implemented by applying the design theme "built the Islamic Character" which is expected in this interior design to foster positive habits and aspects in students. In addition, the application of the concept of "Islamic Architecture" also focuses on the application of Islamic values in general such as space comfort, simplicity, privacy, accessibility, and other Islamic aspects through a user behavior approach.*
