

ABSTRACT

The Odoo-based Enterprise Resource Planning (ERP) system in the Purchase and Inventory module with the Quickstart method is implemented at MSME Neeat Coffee and Kitchen to overcome the problem of not integrating purchase and inventory management in the previous system. Problems that occur with the system that has been used can be overcome by implementing Odoo using the Quickstart method. The results of the Odoo implementation in Neeat Coffee and Kitchen MSMEs show that the integrated Odoo system can improve business efficiency and effectiveness, and facilitate overall business management. Odoo implementation at Neeat Coffee and Kitchen can simplify the process of inputting goods from purchasing goods through Odoo to inventory management, as well as exporting data to Excel according to the data desired by the user.
