

ABSTRACT

Today's technology has developed at a very fast pace. This was followed by a large number of human activities that reached new standards. Speed and precision are the most important requirements for all human processes and needs, especially information needs. The positive impact of technology can now not only be felt by humans in all fields, both business and supporting other human needs. Businesses that are run by involving technology in running their business will be able to make it easier for business people to support their business activities. At this time the need for temporary housing or boarding houses is very important for the community, especially student groups, prospective students or workers, they need temporary housing because they are nomads who do not have or are not native people in the area. Therefore, there is a need for innovation to develop a boarding house search application (MyKos) in the Android-based Jakarta area because currently there is a large need for temporary housing information, from anxiety about finding temporary housing or boarding houses and also anxiety about valid information about the whereabouts and contacts of the owner of the residential house based on this, The idea arose to create an application "DESIGN AND BUILD A BOARDING HOUSE FINDER APPLICATION (MyKos) IN THE JAKARTA AREA BASED ON ANDROID". The application created will have two login views, there is a login or display as a boarding house tenant / boarding house finder and also a login or display as a boarding house owner if the owner wants to register his boarding house.

Keywords : Application, boarding house, login, technology.
