

ABSTRACT

Web based catalog application and ordering management for the Jannah Batik Store in Bandung Regency is an application that displays catalogs and products available at the store along with prices and management of ordering data at the store. This application was made due to a problem at the Jannah batik store, where the owner felt there was a lack of ways to market their products so that this application is expected to expand the reach of Jannah Batik Store consumers. In addition, this application also helps consumers not to bother having to come to the store again. The execution of this application use the Waterfall method and use the PHP Framework CodeIgniter Programming language and MySQL database.
