ABSTRACT

The Smart Village Application for Citeureup Village is a website-based platform aimed at enhancing community service efficiency and transparency in the governance of Citeureup Village. This application is designed to facilitate access to information and administrative services for the residents of Citeureup Village, based on Law No. 6 of 2014, which serves as a strong foundation for building more independent villages. Through observation and interviews with village officials, it was found that there are still many manual processes in data management and services, resulting in delays and inaccuracies in information. Therefore, an integrated population information system is needed to improve service efficiency and government transparency. Application testing was conducted using Blackbox testing and UAT, resulting in positive evaluations of the application's functionality and performance.
