

ABSTRACT

Hasanuddin University Library according to library standards has been implemented as a library with facilities and infrastructure, facilities, service systems, workforce, organizers and management facilities. The library functions as an easily accessible source of information for college assignments and theses, especially for final year students. Visitors or users, most of whom are Hasanuddin University students, will take advantage of the library's functions. However, there are several library facilities that do not meet the National Library Standards, and several other supporting factors do not yet exist. So the Hasanuddin University Library will be redesigned using a behavioral approach using a smart library concept that suits the characteristics of current visitors. The aim is to maximize the function of the library and enable visitors to carry out activities more effectively.
