SMKN 1 Sooko is a vocational high school under the auspices of the government located on Jl. R.A Basuni No.5, District. Sooko, Mojokerto Regency, East Java. This school has 1074 students with 102 male students and 972 female students. Currently, SMKN 1 Sooko has implemented the Independent Curriculum. However, in reality, SMKN 1 Sooko still does not fully carry out or carry out teaching and learning activities in accordance with the Independent Curriculum. This learning is implemented by carrying out more practical learning activities in the laboratory and Teaching Factory rather than theoretical learning activities. Based on the results of surveys and interviews, it is true that SMKN 1 Sooko needs redesign so that SMKN 1 Sooko can accommodate and facilitate student activities either through laboratories or Teaching Factory which are adapted to the atmosphere in the world of work. It is hoped that the design of SMKN 1 Sooko can improve school facilities so that student teaching and learning activities can be carried out optimally.

Keywords: Vocational School, laboratory, Teaching Factory
