The central library of UNDIP is one of the library facilities within the university campus environment. The library has a strong vision to become a "Center for Learning and Research Resources Based on Information Technology," aiming to support UNDIP as a distinguished research university. To achieve this vision, the library has undertaken significant efforts, including transforming into a digital research library. This involves providing more comprehensive facilities that cater to the needs of students and having the capacity to store book collections for the next twenty years. As the advancement of technology continues and the number of books increases each year, it emphasizes the importance for libraries to keep evolving and embracing technology. Although UNDIP library has strived to optimize space utilization, the existing facilities still fall short of meeting visitor needs. Challenges include inadequate space to accommodate book collections for the next 20 years and incomplete facilities to support information access. Therefore, the introduction of a new archive building is expected to transform the library into a hub of information and activities for students and the general public, establishing it as an enduring icon of UNDIP. The construction of the new central library building, incorporating an activity-based approach with the theme of "learning activity" in the interior design, is anticipated to serve as a solution to address the existing challenges.
