

**Abstract :** *Education is a crucial foundation for the development and progress of society. Primary education represents the first opportunity for children to enhance their abilities, providing them with a learning resilience that fosters habits and activities they will carry out in the future. Some schools implement the full-day school system in efforts to cultivate good character and behavior, steering children away from deviant behaviors. The design of elementary schools goes beyond physical infrastructure; it involves creating an educational ecosystem that supports the intellectual, emotional, and social growth of our children, the future generation of our nation.*

*SD Salman Al-Farisi is one of the elementary schools in the city of Bandung that adopts the full-day system. The activities conducted by elementary school students here are quite intensive. Given the density and multitude of activities within the classrooms of SD Salman Al-Farisi, there is a need for spaces that allow for easy movement of furniture, multifunctionality, and more. The approach of flexibility is taken with the hope of addressing the spatial challenges at SD Salman Al-Farisi.*
