

ABSTRACT

Bogor City, is a city known as the center of business, transportation, and tourism. One of the cities in Bogor which is a tourism destination with strategic potential for recreational tourism, staycation, and business is Sentul City, a city area that applies green city development with integration between nature, and the area provides a positive correlation with good health mentally and physically, and is one of the cities in Indonesia that provides real access to nature. The significant growth in the number of tourists shows the need for adequate lodging facilities to meet tourism accommodation needs. Therefore, with the presence of a 4-star Boutique Hotel with facilities according to user needs. Located on Jl. MH. Thamrin, this hotel targets tourists and business people. This design aims to create a 4-star boutique hotel with an attractive identity and has its own characteristics. The design of this hotel focuses on visitor comfort and meets hotel standards and the biophilic approach is emphasized to strengthen the design that describes the Sentul City area. The design method used includes data collection through literature studies, observations, and comparative studies with similar hotels. It is hoped that this design can provide benefits for the community, community, and educational institutions, and the interior science field. This hotel is expected to be an attractive accommodation facility for tourists who come to Bogor City.
