

## ABSTRACT

In the ever-evolving business landscape, PT. Indo Trans Teknologi recognizes the importance of efficient technology in task management. This report discusses the development of MyTask 2.0, a task management application designed to enhance productivity and operational effectiveness within the company. Utilizing the Lumen framework, MySQL, and other supporting technologies, the application has been successfully revitalized with new features such as types, notifications, and improvements to existing functionalities. Testing results indicate that the application functions well and meets user expectations. The development of MyTask 2.0 has not only resulted in a ready-to-use application but has also provided the author with valuable experience in understanding industry dynamics and honing technical skills.

**Keywords:** application development, task management, MyTask 2.0, Lumen, MySQL, productivity, operational effectiveness.
