

Abstract: Vocational High School (SMK) is a type of formal school that offers vocational education at the secondary level. For example, the private vocational school SMK Nuurul Bayan Kalapanunggal Sukabumi faced a number of problems. These include unorganized layout, furniture that does not support student activities, and lack of facilities. Identifying the problems and achieving the design objectives in the redesign of the interior of this SMK, data collection techniques such as comparative studies, questionnaires, interviews, literature studies, and documentation are used. The final design will include the theme and design concept used in two-dimensional and three-dimensional renderings. It is hoped that this design will improve students' learning comfort and provide a good platform for the surrounding community and society.
