

ABSTRACT

D'Rongrong Coffee and Tea is a Micro, Small, and Medium Enterprise (MSME) operating in Bandar Lampung, focusing on selling snacks and drinks. The financial recording process that is still done manually causes difficulties in calculating income and slows down the bookkeeping process. To overcome this problem, this research develops a profit and loss calculation application that aims to improve efficiency and accuracy in financial management. This application is designed using PHP programming language and MySQL database, using waterfall model development method. Application functionality testing is done through the black box testing method. With this application, it is expected that D'Rongrong Coffee and Tea can be more effective in managing finances and producing accurate income statements, thus supporting better decision making in business development.

Keywords: income statement, listing, CodeIgniter, profitability.
