

ABSTRACT

Taman Nasional Gunung Gede Pangrango (TNGGP) is one of the various mountain climbing tourist sites in Indonesia. Administratively, this National Park is included in the area of three regencies in West Java Province, namely Bogor Regency, Sukabumi Regency and Cianjur Regency with a total area of 24,270.80 Ha. The crowded climbing in the TNGGP area has a positive impact on the community and also the manager. However, it is also necessary to pay attention to things that will have a negative impact on the climbing activities carried out.

From the climbing activities carried out in TNGGP, it is still inseparable from violations of regulations, the lack of information delivery to climbers is one of the causes of climbers committing violations that occur. Media is needed that can make information dissemination and can be accepted by all groups. The media that will be used in this final project is 2D animation, using qualitative methods such as direct observation, document study, literature study, questionnaire data, and interviews. Data collection is done by recording and documenting the results of observations, then analyzing and organizing.

Thus it is hoped that this research can provide theoretical contributions and also benefits regarding climbing safety regulations, as well as provide benefits for institutions and other researchers in the development of innovative information media.
