

ABSTRACT

The Web-Based Information System Asset or Goods Data Collection Application is an application which contains a report on goods data contained in Telkom University buildings, such as registering computer lab rooms in the Telkom University Faculty of Applied Sciences building. Goods data collection still uses bookkeeping/manual. The purpose of this application is to help employees who want to use the information system for collecting data on goods in Telkom University buildings. This application uses the waterfall method and uses the PHP programming language and MYSQL database. The results of this application can help logistics employees, especially to record goods/assets in Telkom University buildings.

Keywords: Data Collection, Buildings, Applications.
