

## **ABSRTACT**

This abstract discusses the challenges faced by the Bandung Regency Library and Archives Service in increasing community literacy through the development of a web-based application called Kampung Bedas Literat (KABELAT). Bandung Regency has achieved a high Community Literacy Development Index (IPLM) level, but still faces obstacles in disseminating information about literacy programs and managing literacy communities effectively. The development of KABELAT was carried out in collaboration with the Smart City Center of Excellence (CoE), Faculty of Applied Sciences, Telkom University, presenting the Community Management module and Member Management module to increase efficiency in managing literacy activities and managing community members. This solution also focuses on utilizing digital platforms to overcome the limitations of traditional media in disseminating literacy information. It is hoped that KABELAT can be an innovative solution that supports the efforts of the Bandung Regency Dispusip in expanding the scope of community literacy and increasing digital literacy in the current technological era.
