

ABSTRACT

The Android Based Mobile Application for Trial Registration and the Final Project of the Diploma Information System Study Program focuses on how to manage student files and data to register for trial and final projects. With this application, it is hoped that it can facilitate students to obtain trial information, prepare trial files, and register for final project sessions as well as supervising lecturers and lecturers monitoring student files that are eligible for trial to prepare requirements files for trial. Working method to build this application by using Software Development Life Cycle with the Waterfall Model. This research uses the System Usability Scale as a benchmark for the level of feasibility of the designed application.
