

ABSTRACT

The Goods Procurement Information System at the F3Z SPORT Store is an application used to manage and store goods procurement data. The lack of optimal processing of goods procurement data makes it difficult to find information about goods stock data, inadequate preparation of goods procurement data reports and frequent errors in calculating the amount of goods stock. Therefore, we need an application that can support and solve these problems. Based on these problems, the author intends to prepare a final assignment with the title Website-Based Goods Procurement Application (F3Z Sport Store Case Study). The data collection techniques are observation, interviews and literature study. The author hopes that this application can help the F3Z SPORT Store in processing data on procurement of goods, assist employees in entering and processing data on incoming goods and also help in making data entry reports and data reports. payments so as to improve the business performance of the F3Z SPORT store itself.

Keywords: System, Information, Information System, Procurement of Goods, Shop.
