
LIST OF TABLES

3.1	Summary of the weather variables used in the study, along with their respective units.	17
3.2	Weather feature selection using CC, highlighting the most significant features.	20
4.1	Evaluation of electricity load forecasting models using weather feature selection based on the CC method across different locations. The table includes metrics such as the CC, RMSE, MAPE, and R^2 for each location. .	29
4.2	Evaluation of electricity load forecasting models using weather feature based on the PCA method across multiple locations with different time features. The table presents metrics such as CC, RMSE, MAPE, and R^2 for each location.	30
4.3	Evaluation of electricity load forecasting models using weather feature selection based on the CC and various IMFs. The table presents the CC, RMSE, MAPE, and R^2 values for different scenarios, identifying IMF-8 as the best-performing mode.	30
4.4	Evaluation of electricity load forecasting models using weather feature based on the PCA and various IMFs. The table presents the CC, RMSE, MAPE, and R^2 values for different scenarios, identifying IMF-9 as the best-performing mode.	31
