

ABSTRACT

Tresna Wredha Social Home is a social institution that accommodates neglected elderly people who need good services in terms of good housing, health, and activities to meet the living needs of the elderly. Elderly is the final stage of human growth and development and will experience a decline in physical, psychological and cognitive conditions. This condition will be made worse if the elderly do not receive good service facilities and live a poor quality of life. The interior design of nursing home buildings which is supported by improving facilities and considering good space organization is expected to improve the quality of social care services and have a positive impact on the quality of life of the elderly as the main residents. Space organization, accessibility, security aspects, comfort, functionality, aesthetics and appropriate standardization greatly influence the level of satisfaction and quality of life of the elderly. An inclusive design approach is applied to ensure that there are no gaps between elderly people who have different physical and psychological conditions to be in the same environment without concerns about environmental safety and comfort.
